In the Claims:

Please withdraw claims 1-13 and 30-36 without prejudice.

What is claimed is:

1. (Withdrawn) A thin speaker, comprising:

a rigid enclosure having an opening that is smaller in size than the dimensions of said rigid enclosure;

a semi-rigid lens placed in said opening; and

a magnetic driver inside of said rigid enclosure and attached to said semi-rigid lens wherein said magnetic driver vibrates said semi-rigid lens to create sound.

- 2. (Withdrawn) The speaker of claim 1, wherein said magnetic driver further comprises a magnetic coil and a diaphragm attached to said semi-rigid lens.
- 3. (Withdrawn) The speaker of claim 1, wherein said semi-rigid lens is constructed from a material comprised from the group consisting of plastic, glass, Lexan, and Plexiglas.
- 4. (Withdrawn) The speaker of claim 1, wherein said semi-rigid lens is transparent.
- 5. (Withdrawn) The speaker of claim 1, wherein said rigid enclosure contains a LCD module that is viewable through said semi-rigid lens.

- 6. (Withdrawn) The speaker of claim 1, wherein said semi-rigid lens is attached to said rigid enclosure.
- 7. (Withdrawn) The speaker of claim 1, wherein said semi-rigid lens is attached to a thin semi-rigid surface that is attached to the outside of said rigid enclosure.
- 8. (Withdrawn) The speaker of claim 7, wherein said thin semi-rigid surface is larger in size than said semi-rigid lens.
- 9. (Withdrawn) The speaker of claim 1, further comprising a mounting bracket for attaching said magnetic driver to said semi-rigid lens.
- 10. (Withdrawn) The speaker of claim 9, wherein said mounting bracket is rectangular in shape and has a left end and a right end and said magnetic driver is attached in between said left end and said right end.
- 11. (Withdrawn) The speaker of claim 10, wherein said mounting bracket is attached to aid semi-rigid lens for increased vibration of said semi-rigid lens for increased sound volume.
- 12. (Withdrawn) The speaker of claim 9, wherein said mounting bracket is attached to said semi-rigid lens.

- 13. (Withdrawn) The speaker of claim 1, wherein said rigid enclosure is environmentally-sealed.
- 14. (Original) A kiosk that interacts with a user, comprising:

a housing;

a control system in said housing;

an input device coupled to said control system;

a display coupled to said control system, comprising:

an rigid enclosure having an opening that is smaller in size than the dimensions of said rigid enclosure;

a semi-rigid lens placed in said opening; and

a magnetic driver inside of said rigid enclosure and attached to said semirigid lens wherein said magnetic driver vibrates said semi-rigid lens to create sound;

said control system adapted receiver the user's input from said input device and to control information to said display in response thereto.

- 15. (Original) The kiosk of claim 14, wherein said input device is comprised from the group consisting of a keypad, soft keys, touch screen keys, wireless communication device, magnetic-stripe card, optical-coded card, and voice recognition module.
- 16. (Original) The kiosk of claim 14, wherein said magnetic driver further comprises a magnetic coil and a diaphragm attached to said semi-rigid lens.

- 17. (Original) The kiosk of claim 14, wherein said semi-rigid lens is constructed from a material comprised from the group consisting of plastic, glass, Lexan, and Plexiglas.
- 18. (Original) The kiosk of claim 14, wherein said semi-rigid lens is transparent.
- 19. (Original) The kiosk of claim 14, wherein said rigid enclosure contains a LCD module that is viewable through said semi-rigid lens.
- 20. (Original) The kiosk of claim 14, wherein said semi-rigid lens is attached to said rigid enclosure.
- 21. (Original) The kiosk of claim 14, wherein said semi-rigid lens is attached to a thin semi-rigid surface that is attached to the outside of said rigid enclosure.
- 22. (Original) The kiosk of claim 21, wherein said thin semi-rigid surface is larger in size than said semi-rigid lens.
- 23. (Original) The kiosk of claim 14, further comprising a mounting bracket for attaching said magnetic driver to said semi-rigid lens.

- 24. (Original) The kiosk of claim 23, wherein said mounting bracket is rectangular in shape and has a left end and a right end and said magnetic driver is attached in between said left end and said right end.
- 25. (Original) The kiosk of claim 24, wherein said mounting bracket is attached to said semi-rigid lens for increased vibration of said semi-rigid lens for increased sound volume.
- 26. (Original) The kiosk of claim 23, wherein said mounting bracket is attached to said semi-rigid lens.
- 27. (Original) The speaker of claim 14, wherein said rigid enclosure is environmentally-sealed.
- 28. (Original) A fuel dispenser for dispensing fuel into a vehicle, comprising: a housing;
 - a hose attached to said housing;
 - a nozzle attached to said hose;
- a control system in said housing that controls the dispensing of fuel through said hose and said nozzle into the vehicle;
- an input device coupled to said control system for receiving information from the user during the fueling of the vehicle;

a display coupled to said control system that displays information and generates sound to the customer during the fueling of the vehicle, comprising:

a rigid enclosure having an opening that is smaller in size than the dimensions of said rigid enclosure;

a LCD module in said enclosure and coupled to said control system;
a transparent semi-rigid lens placed in said opening and in front of said
LCD module; and

a magnetic driver inside of said rigid enclosure and attached to said semirigid lens wherein said magnetic driver vibrates said semi-rigid lens to create sound;

said control system adapted receiver the user's input from said input device and to control information and sound to said display in response thereto.

- 29. (Original) The fuel dispenser of claim 28, wherein said semi-rigid lens is attached to a thin membrane that is attached to the outside of said rigid enclosure.
- 30. (Withdrawn) A method of producing a thin speaker for an enclosure, comprising the steps of:

cutting out an opening in a rigid enclosure;

placing a semi-rigid lens in said opening; and

attaching a magnetic driver on the de of said rigid enclosure to said semi-rigid lens wherein said magnetic driver vibrates said semi-rigid lens to create sound.

- 31. (Withdrawn) The method of claim 30, wherein said attaching comprises: attaching said magnetic driver to a mounting bracket and to said semi-rigid lens; and attaching said magnetic driver to said semi-rigid lens.
- 32. (Withdrawn) The method of claim 30, further comprising environmentally-sealing said rigid enclosure.
- 33. (Withdrawn) The method of claim 30, further comprising attaching said rigid enclosure to a kiosk.
- 34. (Withdrawn) The method of claim 30, further comprising attaching said rigid enclosure to a fuel dispenser.
- 35. (Withdrawn) The method of claim 30, further comprising placing a LCD module on the inside of said rigid enclosure that is viewable through said semi-rigid lens.
- 36. (Withdrawn) The method of claim 30, further comprising: placing a semi-rigid surface on the outside of said rigid enclosure; and attaching said semi-rigid lens to said semi-rigid surface.
